Fronius offers customised storage solutions for every requirement.

The new Energy Package with LG Chem RESU H batteries and the Fronius Checkbox is the optimised solution for price- and quality-conscious system owners. With a strong commitment to cost effectiveness and operational reliability, it is a welcome addition to the range of batteries from Fronius.

In power categories ranging from 3.0 to 5.0 kW, the three-phase Fronius Symo Hybrid inverter allows excess energy produced by a photovoltaic system to be stored in LG Chem RESU 7H and LG Chem RESU 10H batteries. This results in maximum self-consumption and maximum independence. The Solar.web monitoring tool offers optimum visualisation and monitoring of the system and, together with the Fronius Smart Meter, gives a comprehensive overview of the system and household energy consumption. The Fronius Symo Hybrid supports either a DC or an AC coupling of storage systems. In the event of an AC coupling, another PV generator can be connected to the Fronius Symo Hybrid. The Fronius Energy Package is therefore suitable for new installations as well as for retrofitting batteries to existing PV systems.*

*Not available with emergency power function – a suitable Fronius alternative is the Energy Package with Fronius Solar Battery, which is equipped with an emergency power function.

TECHNICAL DATA FRONIUS SYMO HYBRID

The Fronius Symo Hybrid is the heart of the storage solution for 24 hours of sun - the Fronius Energy Package. With power categories from 3.0 to 5.0 kW, the three-phase inverter allows surplus energy from a photovoltaic system to be temporarily stored in the LG Chem RESU H Battery. Through intelligent energy flow management, the integrated Multi Flow Technology allows both the AC and the DC coupling of storage systems.
